If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10 August 2011 has been entered.

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). A certified copy of parent Application No. 0226730.0, filed on 18 November 2002 in the United Kingdom has been filed. Therefore, a priority date of 18 November 2002 is granted.

Allowable Claims

2. Claims 2,3,7,11-20,22-24 and 27-30 are allowed over the prior art of record.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Art Unit: 3761

4. Authorization for this examiner's amendment was given in a telephone interview with Gary M. Lobel, PhD. on Tuesday, 25 January 2011.
5. The application has been amended as follows:
6. Claims 25 and 26 are canceled.

Reasons For Allowance

7. The following is an examiner's statement of reasons for allowance: the closest prior art of record, Kawaguchi et al. (US 20040104246), discloses a connector device (§ [0027], Figs. 1, 5, adapter body 12 / 112) comprising:

a rigid tube part (§ [0038], Fig. 5, tube 30);

first means for threadably attaching (§ [0049], Fig. 5, annular member 112b threadably attaching adapter body 112); and

a cutting member or tubular first spike (§ [0049], [0051], Fig. 5, pointed end 112a).

However, Kawaguchi fails to teach or fairly suggest alone or in combination the essential structures of the claimed device, such as venting means and cutting member center axis offset from a center axis of the connector device. The venting means is critical since it allows a laminated package to retain its shape when liquid is emptied (specification p. 5, lines 19-24; p. 13, lines 28-34, Fig. 2, venting means 7). The venting means also prevents airborne contaminants from entering the package when allowing air to equalize pressure (specification p. 13, lines 28-35, Fig. 2, filter 9). Also, the offset cutting member axis is critical since it is moved in a spiral when moving into the laminated package (specification, p. 14, lines 9-13, citing EP1088765).

Art Unit: 3761

8. Similarly, Evans; (US 2668533) discloses a medical liquid dispenser (col. 1, lines 1-5, 30-42, Fig. 1, outlet member 18) comprising:

a first venting means (col. 2, lines 45-52, col. 3, lines 47-59, Fig. 2, ball check valve member 56). Examiner cited Evans as teaching a venting means. However, Evans also lacks the critical offset cutting member, since Evans lacks a cutting member and instead connects to tubing without cutting a laminated package.

9. Similarly, Allanson et al. (US 20030226855) discloses a connector device (§ [0008], [0021], Fig. 1, self-sealing dispensing tap), comprising:

a rigid tube part (§ [0021], Fig. 1, elongate tube 10);

a third means for fixedly attaching a rigid tube part to a laminated paper packaging system (§ [0038], [0040], Fig. 10, resilient seal 70);

a first rim formed of a rigid material (§ [0038], [0039], Fig. 10, clamp ring 60 threaded to tube 10, suggesting rigid material); and

a second rim formed of a flexible material (§ [0038], [0040], Fig. 10, resilient seal 70 made of silicone).

However, Allanson lacks the critical venting means and offset cutting member as discussed above. Additionally, the first and second rims of Allanson are not spaced at a fixed distance, since clamp ring 60 is moved with a threading instead of being formed integrally with resilient seal 70.

Art Unit: 3761

10. Also cited previously, the following references fail to remedy the deficiencies of the references cited above.

- ◆ Quinn et al. (US 4921138) discloses a visualization tube (col. 5, lines 25-34, Fig. 1, col. 26);
- ◆ Schafer (US 5993422) discloses a pump unit (col. 3, lines 54-59, Fig. 1, pump unit 2); and
- ◆ Broman (US 2969063) discloses a transparent intermediate bag (col. 2, lines 19-26, Fig. 1, device 22 made of translucent PVC).

11. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
